

seca cursa 818

In this case the bottom is right at the top.

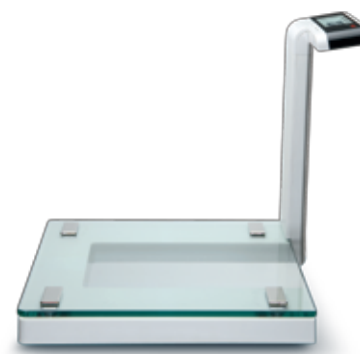

- Analysis of body fat and body water. For better control.
- Keyboard at half pedestal. For easy entry of personal data.
- Large LCD figures. For easy reading.
- More than 165 years of experience. For maximum precision.
- From the global market leader for medical weighing and measuring.

seca cursa 818:

In this case, practical is also beautiful.

Take a look at the generous display. Even though it is located at half height, it can be read very easily. Incidentally, this is also due to the fact that the LCD tips forward towards the viewer.

In this case, luxury is also unobtrusive.

Full pedestal, half pedestal. seca fulfils every customer desire. With a scale that is tastefully unobtrusive even though it has everything: fat measurement, water measurement, safety glass, mounting elements of brushed stainless steel. So users feel right on top, even at half height. This scale is for users who need to pay attention to their health or who are currently working on their bodies. In short, for people who are reliant on exact measuring results.

In this case, elegant is also robust.

This scale speaks for itself: high-quality materials that catch the eye. An 8-millimetre-thick glass platform made of single-pane safety glass is generously coated with optically transparent ITO (Indium Tin Oxide), which is particularly conductive and guarantees uninterrupted skin contact during measuring. It keeps its promise of maximum precision during measuring. Scales from seca have long been renowned for their low tolerances, which are now in seca personal scales and the best in the private sphere.

In this case, simply good is also very good.

Convenience writ large: simply press the memory button on the pedestal underneath the display and start the weighing process. Equally simple is the entry of personal data such as age, gender, weight and fitness level, so that the scale recognises its user again and again. You see, a personal scale from seca makes even the technologically sophisticated weighing easy.

The display at half pedestal is easy to read.

Four load cells of brushed stainless steel.
